PERFORMANCE CERTIFICATE.

Measuring and Controlling the pick-up after a Dyeing Padder.

We are very happy with the results and the performance of the Pleva system. It was installed in our plant in Ahmedabad in the year 2003 and it is still running with full performance.

The system is measuring the pick-up Left, Center and Right and if anything happens on then fabric (for.e.g absorbency), it reacts immediately by changing the pressure of the squeezing rollers.

We got the CSV under control and we are not running any fabric without using the Pleva device.
